Vercel

Vercel is a great deployment platform, ideal for more complex sites.

We just saw how to deploy a simple site, composed of an HTML page, to Netlify.

Let's do the same on Vercel now.

Both deployment platforms are great, and allow you to host the site for free with them.

I want to expose you to different options, so you can pick the one you like the most.

You're not limited to those 2, but I think they're the easiest path from "no website" to "website".
