# Netlify: Create a Netlify account

Go to [netlify.com](https://netlify.com) and click the **Sign up** link (or just go to <https://app.netlify.com/signup>).

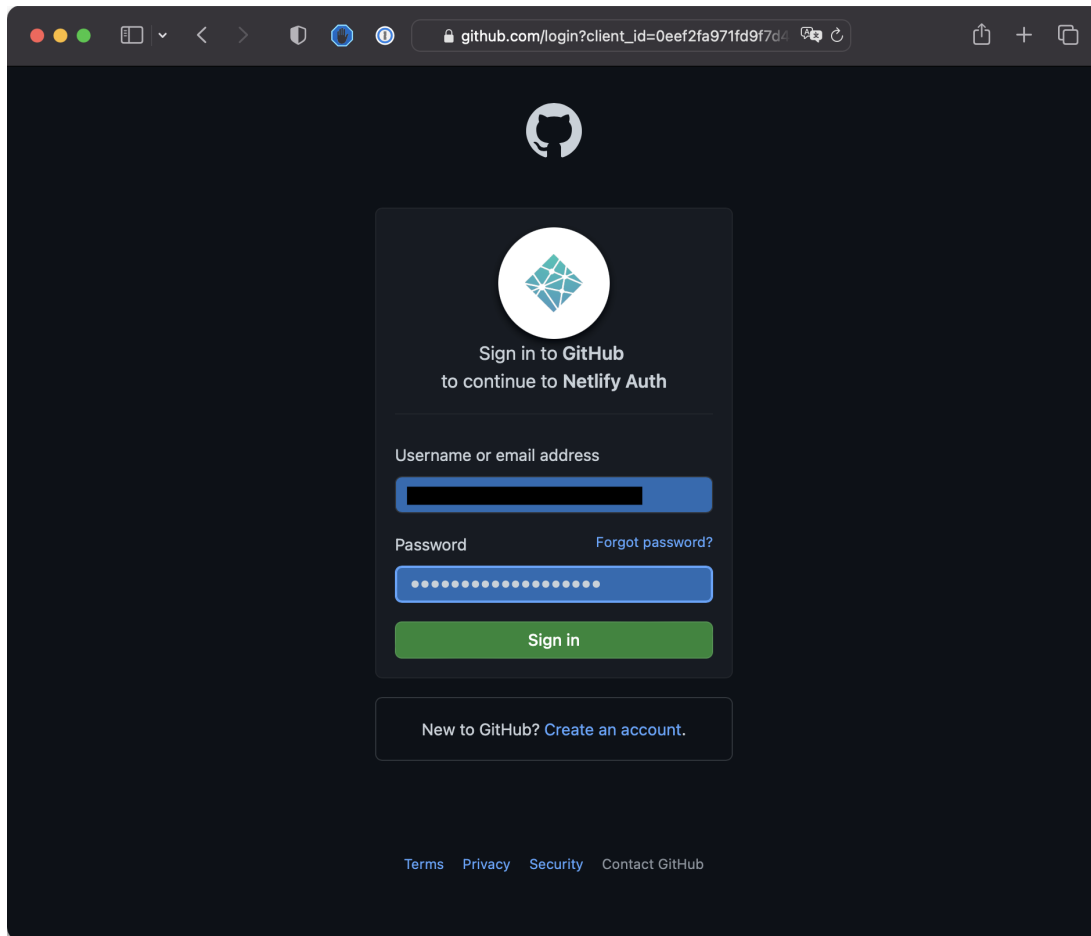

Already have an account? [Log in](#)

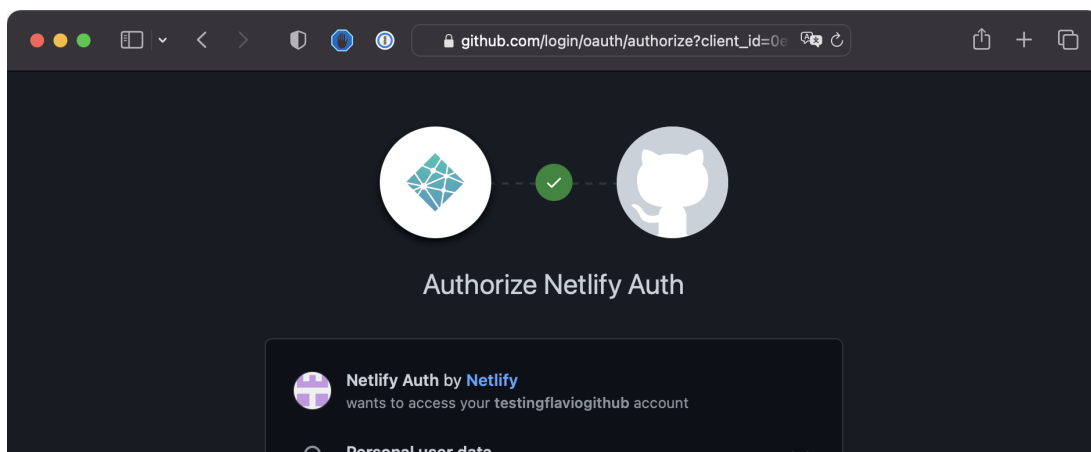

You can sign up using the GitHub login.

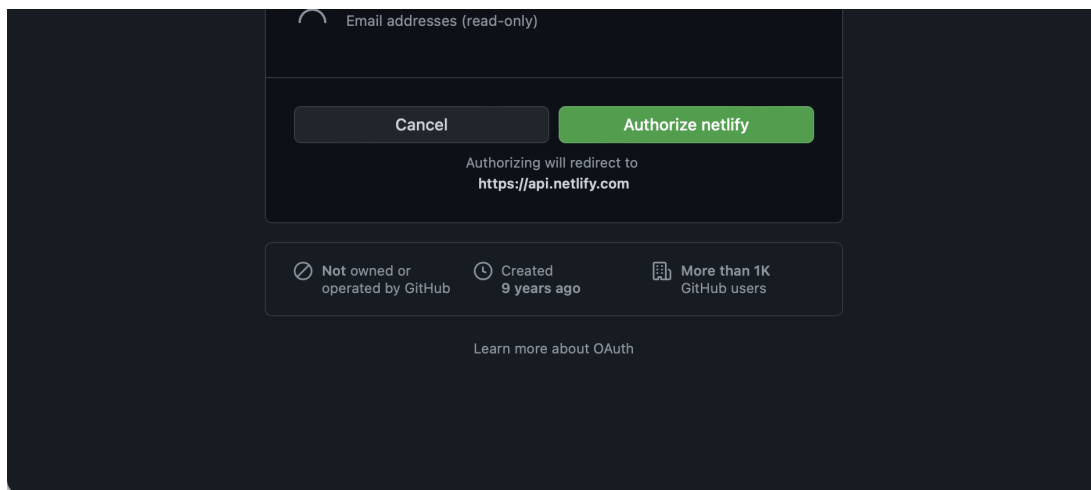

I think that's the simplest path.

Click the GitHub button on the page, then login to GitHub:

Authorize Netlify to access your GitHub data

Click **"Personal"** and then **"Set up and continue"** (you can ignore the questionnaire):

A screenshot of the Netlify "Get started" questionnaire in a browser window. The URL is "app.netlify.com/signup-questions". The page is titled "Get started" and "Tell us about yourself". It says "Your responses will help us improve your experience." Under "I'm using Netlify for", there are four buttons: "Client", "Work", "Personal" (which is highlighted with a green border), and "School". Below this is a "Required field" label. Then, there are three dropdown menus: "I'm a:", "My first project will be:", and "I discovered Netlify from:". The "Personalize your team space" section follows, with the text "Make your team your own." and a "Name your team" label. Below this is a text input field with the placeholder "Project name or your name". A note at the bottom says "People who use Netlify for personal work often use a project name or their own name." At the very bottom is a green button labeled "Set up and continue".

Now we're ready to go.
